KLÖCKNER PENTAPLAST INTRODUCES PENTAPHARM® ACLAR® 600 ULTRA, ULTRA HIGH BARRIER FILM

Gordonsville, Virginia, USA – October 17, 2011 – The Pentapharm® film product line has been extended to include Pentapharm® ACLAR® PA600/02 barrier films for pharmaceutical packaging applications. Pentapharm® ACLAR® PA600/02 film is a two-layer (PVC/ACLAR®) laminated film that provides the highest moisture barrier available in the Pentapharm® ACLAR® product line. Pentapharm® ACLAR® films are offered globally and manufactured throughout the worldwide network of Klöckner Pentaplast production facilities.

Pentapharm® ACLAR® PA600/02 films are made with Honeywell's 152-micron ACLAR® UltRx6000, which is 50% thicker than the current maximum gauge ACLAR® films available in the marketplace today, for a 50% increase in moisture barrier. Ideal for solid oral-dose packaging, powders, ethical drugs, OTC, generics, physician samples, veterinary medicine, and nutraceuticals that require ultra, ultra-high moisture barrier, Pentapharm® ACLAR® PA600/02 films are a cost-effective solution as these films allow for small footprint packages, which require less material and total cost per package as compared to other packages in the non-polymer ultra-high barrier range. Pentapharm® ACLAR® 600/02 films are transparent, non-yellowing, and offer excellent machinability on existing standard form/fill/seal packaging lines and tooling. With rigid vinyl as the product contact layer, Pentapharm® ACLAR® 600/02 films offer sealability to common vinyl-compatible lidstocks.

"Pentapharm® ACLAR® 600/02 films were developed in response to customers' needs for an ultra, ultra-high moisture barrier pharmaceutical film," notes Daniel Stagnaro, Pharmaceutical Films Business Manager, Klöckner Pentaplast/Americas. "The expansion of our pharmaceutical film range to include this film, along with our existing Pentapharm® films, continues to provide our customers with the
